SAC clutch removal

1. Select the appropriate centring pin depending on the pilot bearing diameter and screw onto the clamping mandrel with the receiving thread M8.

2. Equip the clamping mandrel with the appropriate clamping sleeve, depending on the hub diameter of the clutch disc.

3. Insert the fully equipped clamping mandrel (relaxed clamping sleeve) into the pilot bearing.

4. Guide the new clutch disc over the centring device and insert into the flywheel receptacle.
Attention: It is important for an optimal guiding that the centring pin is close-fitting in the pilot bearing.

5. Now the clamping sleeve is braced in the hub of the clutch disc by securing the clamping mandrel with one hand and using the other hand to actuate the drive on the mandrel end so that the clamping sleeve spreads in the hub (finger tightening is sufficient).

6. Place the new clutch pressure plate on the flywheel (note centring pins). Select the matching threaded bolts and screw 3 threaded bolts into the flywheel hand-tight offset by 120°. Offset by 90° for 4-pitch! (e.g. Mercedes W169 A-class from MJ 2004).
Attention: Always screw the short thread end into the flywheel.

7. **Attention:** Pressure plate does not abut!

8. **Correct:** Pressure plate abuts!

9. Insert the cover fastening screws into the open threaded receptacles of the flywheel and tighten.

10. Guide the SAC clamping device over the threaded bolts.

11. Screw on hexagonal nuts by hand until these are flush with the threaded bolts (parallel mounting of the SAC clutch tool set).
Attention: The pressure spindle must be completely screwed back.

12. Screw the pressure spindle onto the catch until the disc spring is actuated.
Attention: Only turn until the cover of the pressure plate touches the support of the disc flywheel.

13. Tension disc springs.

14. Completely turn back the pressure spindle - disc spring will release tension.

15. Loosen hexagonal nuts - remove clamping device.

16. Remove threaded bolts.

17. Screw the missing cover fastening screws into the now free threaded receptacles on the flywheel hand-tight. At the end, tighten all fastening screws with the torque stipulated according to the manufacturer's specifications.

18. Remove the clutch centring pin.

SAC clutch installation

During the controlled removal, the work steps take place in the reverse order from the installation, whereby the use of the centring device is not required here.
